HONEY MARKET FOR THE MONTH OF SEPTEMBER, 2002
IN VOLUMES OF 10,000 POUNDS OR GREATER UNLESS OTHERWISE STATED

- REPORT INCLUDES BOTH NEW AND OLD CROP HONEY -

Prices paid to beekeepers for extracted, unprocessed honey in major producing states by packers, handlers & other large users, cents per pound, f.o.b. or delivered nearby, containers exchanged or returned, prompt delivery & payment unless otherwise stated.

ARKANSAS	- Soybean, amber, 93¢
CALIFORNIA	- Mixed Flowers, extra light amber, \$1.35 - 1.50 - Mixed Flowers, light amber, \$1.15 - 1.30 - Mixed Flowers, light amber, \$1.15 - 1.25 (some small lots, some 30-day payment)
FLORIDA	- Gallberry, light amber, \$1.25 - Gallberry, cut comb, \$1.40 - Orange Blossom, white, \$1.50 - Orange Blossom, extra light amber, \$1.30-1.50 - Saw Palmetto, extra light amber, \$1.05 (previous contract) - Floral not reported, white, \$1.43
IDAHO	- Floral not reported, white, \$1.35
ILLINOIS	- Floral not reported, white, \$1.42 - 1.52
MICHIGAN	- Clover, white, \$1.01
MINNESOTA	- Clover, white, \$1.17 - 1.55
MONTANA	- Alfalfa, white, \$1.00 - 1.05 - Clover, white, \$1.15 - 1.53 - Wildflowers, extra light amber, \$1.00

NEW YORK	- Clover, white, \$1.47
NORTH DAKOTA	- Clover, white, \$1.01 - 1.53
OHIO	- Floral Source Not Reported, white, \$1.50
SOUTH DAKOTA	- Alfalfa, white, \$1.12 - Clover, white, \$1.10 - 1.52
TEXAS	- Mixed Flowers, white, \$1.48
WASHINGTON	- Alfalfa, white, \$1.01 - Alfalfa, extra light amber, \$1.01 - 1.40 - Alfalfa, amber, \$1.00 - 1.40 - Mint, extra light amber & light amber, 86¢ (small lots) - Mixed Flowers, light amber, \$1.00 - 1.37 - Mixed Flowers, amber, 86¢ (small lot) - Onion, amber, 95¢ (small lot)
WISCONSIN	- Clover, white, \$1.30 - 1.40

Prices paid to Canadian beekeepers for unprocessed bulk honey by packers & importers in U.S. currency, f.o.b. shipping point, containers included unless otherwise stated. Duty & crossing charges extra. Cents per pound.

ALBERTA	- Clover/Alfalfa, white, \$1.60 (delivered to U.S. packer)
SASKATCHEWAN	- Canola/Clover, color not reported, \$1.21

Prices paid to importers for bulk honey, duty paid, containers included, cents per pound ex-dock or point of entry unless otherwise stated.

EAST COAST.....ARGENTINA	- Clover/Alfalfa, white, \$1.75 - Mixed Flowers, extra white, \$1.76 - Mixed Flowers, white, \$1.71 - 1.73 - Mixed Flowers, extra light amber, \$1.71 - 1.73 - Mixed Flowers, light amber, \$1.71 - 1.73
EASTERN EUROPE	- Mixed Flowers, extra light amber, \$1.45
MEXICO	- Mixed Flowers, light amber, \$1.40
VIETNAM	- Mixed Flowers, light amber, \$1.45 - 1.25

COLONY, HONEY PLANT & MARKET CONDITIONS DURING SEPTEMBER**APPALACHIAN DISTRICT – (MD, PA, VA, WV) ZZZ**

Cooler fall temperatures are in the works and the area received a good soaking rain from Hurricane Isadore's remnants; however, the area is still enveloped by the severe drought which has resulted in reduced fall bloom. Directly after the rain, bees were able to gather some pollen from golden rod and other fall flowers, but amounts were very light and shortly thereafter, everything dried up again. Many colonies have insufficient winter honey stores and Inspectors have been recommending supplemental feeding (sugar water and pollen patties) since mid-August and are continuing to do so. Beekeepers who heeded this advice have seen some brood rearing in their colonies and will have new bees for the winter. Others may have problems as older bees may not winter as well. Insect problems are down with the exception of an occasional hive beetle report in VA, which is being treated and monitored closely.

CALIFORNIA ZZZ

Record heat gripped much of the state during September interrupted only occasionally by rainfall in the mountains and along the northern coast and in some of the valleys. Riverside set a record on the 1st when they reached 112 degrees while downtown Los Angeles recorded 101 degrees, their first triple-digit since September 30, 1999. On the 20th, Sacramento posted a daily-record high of 102 degrees. It was their 31st day of triple-digit heat this year. Monthly records continued to be set through the end of October including Simi Valley at 103 and 108 degrees on the 22nd and 23rd. Sacramento had eleven days of triple-digit heat easily breaking the record previously set of 8 days. In contrast, Campo, along the Mexican Border, only reached a daily high of 64 degrees on the 28th, just four days after a record high of 100 degrees.

Bees have gone into their seasonal slowdown. They are not brooding as much as they were so colonies are a little lighter. They are reported to be in good condition as they continue to sit in their summer locations near rivers, open grain fields and cattle ranges. Because of the heat, available fall plants are spotty, but bees were bringing in pollen from rabbit brush, tamarack, tarweed and blue curl. Bees sitting in locations where there were no fall flowers, are being fed.

Wax handlers were beginning to take in small amounts of wax but mostly for trade. Demand for wax products continues to be very slow. Sales of beekeeping supplies are also down despite the fact beekeepers are being paid more than double for their honey compared to last year.

Honey packers are not only paying much higher prices, they are finding large lots of honey are very difficult to find. Most of the honey available is small lots of 2-5 drums. Sales of bulk honey are also down in some cases, orders are being cancelled by smaller customers because of the high prices.

COLORADO ZZZ

The state remained dry most of the month, except for the last week when most areas of the state received some monsoon moisture. Some mountain areas of Northern Colorado received from two to four inches of snow as the weather patterns past. Temperatures remained about normal throughout the month with highs in the mid 80s to 90 degrees and the lows in the low 40s to 50 degrees. Most beekeepers have started medicating the colonies that remained in the state because of the stress the bees experienced during the very dry hot summer. Some fear losses during the winter will further deplete the colonies and drive them out of business.

FLORIDA ZZZ

At the state level, the most prevalent supplies of honey coming out of south Florida is Brazilian Pepper. Even though Brazilian Pepper honey is available, the quality is spotty and the quantity is still not up to where it was last year due to a late bloom which is still trickling in. Another floral source, Melaleuca, is blooming now and should continue to do so through the winter months. Although there is more Melaleuca is blooming, when given a choice, the bees will always prefer the Brazilian Pepper. Goldenrod is the leading variety in the northern part of the state and beekeepers there are experiencing a decent crop this year. On a down note, the Small Hive Beetle, which invades and taints the hive, is coming on stronger with the added rains that the state has been experiencing as of late. Though the abundance of rain is good for the growth of the flowers that the bees prefer to visit, with that comes the added humidity and moisture that the Small Hive Beetles thrives on.

GEORGIA ZZZ

Colonies around the state were generally good condition. There was a dearth of any significant nectar sources in most areas of the state in September. Several beekeepers were involved in supplemental feeding to compensate for light stores. This was especially evident in south and middle Georgia following earlier honey crops in the spring and early summer that produced average to below average yields. In the northern half of the state, fall floral sources such as aster and goldenrod were increasing colony strength and level of stores. Commercial beekeepers around the state were beginning with their fall maintenance programs including the treatment of mites and American foul brood.

IDAHO ZZZ

Some Beekeepers are going through hive feeding them and getting them ready for winter, while others are still extracting honey. The weather for most of the month of September was normal until the last week which brought cooler temperatures with highs in the low to mid 60s. Most producer's report that the honey crop is at least average. The wholesale market was higher again mainly because of short supplies in other growing areas.

ILLINOIS ZZZ

Beekeepers have finished fall extraction activities under favorable weather conditions over most of the state. Most beekeepers finished installing mite treatments and prepared their bees for overwintering. Temperatures were warmer than normal with high's in the low to mid-90's over central and southern areas. The 15th, most of the state had measurable rainfall breaking the drought which occurred throughout the summer. The fall flow of aster and goldenrod were short due to dry conditions. Beekeepers have started supplemental feeding. Other floral sources of butterfly, ragweed, roses, mums and African Marigolds produced favorable pollen and honey stores.

Beekeepers noted demand for local honey was good due to fall festivals. Bulk honey movement was moderate and retail sales were also reported moderate.

INDIANA ZZZ

Bees were reported to be in good condition going into fall. Extraction wrapped up over most of the state. Beekeepers treated for mites as honey extraction was completed. The population of the Small Hive Beetle and mites over the state has continued to decline due to beekeepers regular schedule of treatments. State inspections have wound down for the season. Colony strength going into winter at this point should be good.

INDIANA continued...

Most areas received needed rainfall the last of the month due to the hurricane in the Gulf of Mexico. An excellent fall honey flow from mainly goldenrod, butterfly bush and aster.

Fall festival sales of honey and wax were reported very good. Retail demand was also reported good. Wholesale honey demand picked up as well as packer interest.

MISSISSIPPI ZZZ

Colonies around the state were generally in good condition. In the southern portions of the state, the majority of September noted a dearth of any significant nectar sources. Colonies were primarily feeding off reserves built up earlier in the summer. Towards the end of September, goldenrod was being worked by the bees. Beekeepers were optimistic that their colonies will be able to increase their levels of stores during the goldenrod flow. In the central and northern portions of the state an excellent fall honey was experienced in September and continues into October. Excellent yields producing surplus honey was noted from floral sources such as aster, goldenrod, and Spanish needle. Commercial beekeepers around the state were beginning with their fall maintenance programs including the treatment of mites and American foul brood.

MISSOURI & IOWA ZZZ

September was normal except for a slight drought through the week of September 24th. This made harvesting conditions fairly slow. Bee populations were still fairly high. Nectar flow from aster and goldenrod was good in both Iowa and Missouri. Which allowed the bees to fill the main chamber and in some places even store an extractable surplus in the supers. Pollen collection was fairly slow in Missouri and fairly good in Iowa from goldenrod and aster. Honey storage range from fairly good to good over the two states. Beekeepers in some locations will have moderate feeding to get the bees ready for winter. In areas where beekeepers have done about two third of extraction in both states. Most do not plan to extract the fall flow they treated beehives for mites, mostly in Iowa.

MONTANA ZZZ

Most of the state reported highs in the mid-80's to low 90's the first three weeks of October. Nighttime lows were fairly mild with lows in the 40's and 50's except for the southwest corner which dropped to 13 degrees the week ending the 22nd. Fall arrived the end of the month when daytime highs were in the mid-60's and 70's and nighttime lows were in the 20's to mid-30's. Light precipitation fell in portions of the state but the month ended with topsoil moisture still 36% short.

The bees are reported to be in fairly good condition with adequate size clusters. Most all of this year's honey crop has been extracted with most producers harvesting about 75% of a normal crop. Part of the small crop is due to poor spring build-up in packages just when crop were beginning to bloom. Most beekeepers that don't winter their bees in Montana have sold them.

Migratory beekeepers were just starting to take their bees to holding yards in California the end of the month. There is concern with the hot, dry weather there.

NEW ENGLAND ZZZ

September weather for the New England area was seasonable with temperatures in the mid 70s to low 80s precipitation was nearly normal thanks to the remnants from tropical storms in the Gulf of Mexico.

Beekeepers report a good harvest with yields for some twice the amount of last years. Winter stores are reported in good shape though some weaker hives are being fed at the present time. Beekeepers are also medicating hives at this time.

Demand for honey remains good with stronger sales than last year.

NORTH CAROLINA ZZZ

According to the North Carolina Drought Monitoring Council, widespread rainfall for most of North Carolina was received from remnants of Tropical Storm Hanna, providing some short-term relief. However, the long-term drought conditions still remain and are likely to continue for several months. The Piedmont region remains in an extreme drought and water conservation is still necessary. The mountain areas are reporting a good flow of honey this year. The sourwood honey was of higher quality than the past few years, but has a little darker color due to a bumper crop of red sumac. The Piedmont and Coastal Plains were so dry that a lot of the colonies were on the verge of starvation. However, the recent rains have helped the golden rod and aster, but supplemental feeding is still being recommended. The small hive beetle has been found in 38 counties in the state at varying levels. The most recent find was in the western part of the state. Beekeepers are being encouraged to continually check their hives and begin treatments immediately if the small hive beetle or Varroa mites are discovered.

OHIO ZZZ

Weather was favorable most of the month with ample feeding sources. Supers were reported mostly full and mites not a large factor. Autumn looks to continue to have an abundance of pollen due to the rains from hurricane remnants. Relatively warm weather is bringing on heavy bloom from goldenrod and other wild sources.

OREGON ZZZ

September began with cooler than normal temperatures across the state, with the exception of some areas in south-central Oregon, all weather stations reported low temperatures below 32 degrees. The next three weeks were hot and dry with the warmest temperatures near 100 degrees in the southwest valleys. Redmond posted consecutive daily-record highs from the 11-13th, including a high of 96 degrees on the 13th. No precipitation was recorded the week ending the 15th. Occasional rain fell in most locations the rest of September but the month ended with topsoil moisture 50% very short and 38% short.

The bees are in good condition but are showing signs of preparing for winter as their brooding is down. Rains the end of the month revived a few plants and they were bringing in a little pollen. Mite counts are also down. This year's honey crop is slightly below last year as the weather turned hot and dry the end of June just as the honey flow was getting off to a good start.

UTAH ZZZ

Some Beekeepers are going through hive feeding them and getting them ready for winter, while others are still extracting honey. The weather for most of the month of September was normal until the last week which brought cooler temperatures with highs in the low to mid 60s. Most producer's report that the honey crop at a little less than average. The wholesale market was higher again mainly because of short supplies in other growing areas imports from China being down.

WASHINGTON ZZZ

The entire state was warm and dry the first week of September. Much needed rain fell in Western Washington the second week but temperatures in Eastern Washington remained above normal. Along the Columbia River several locations posted record highs when they rose over 95 degrees. Conditions were variable through the end of the month with occasional rainshowers, mostly in Western Washington reported. Any rain that came this late in the season did little to help the dry conditions. Temperatures also cooled in many areas. Pullman set a record low on the 21st when they dropped to 27 degrees.

WASHINGTON continued...

The honey crop is only fair this year because of the hot, dry conditions during the peak honey flow. Migratory beekeepers were beginning to haul their bees to California holding yards.

WISCONSIN ZZZ

Most beekeepers that keep their bees in the state over the winter have finished installing treatment strips for fall treatment of mites. Over most of the state, early estimates were honey production was close to normal despite the extended heat wave and periods of dry weather. The main floral sources were an excellent crop of goldenrod and aster. Most beekeepers were pleased with their colony strength going into winter. Most migrant beekeepers have moved their bees to winter yards, which is earlier than previous years.

Honey demand had been very good due to fair festivals. Bulk honey and wax movement also saw some improvement according to many beekeepers.
